Assessments Completed

Challenge

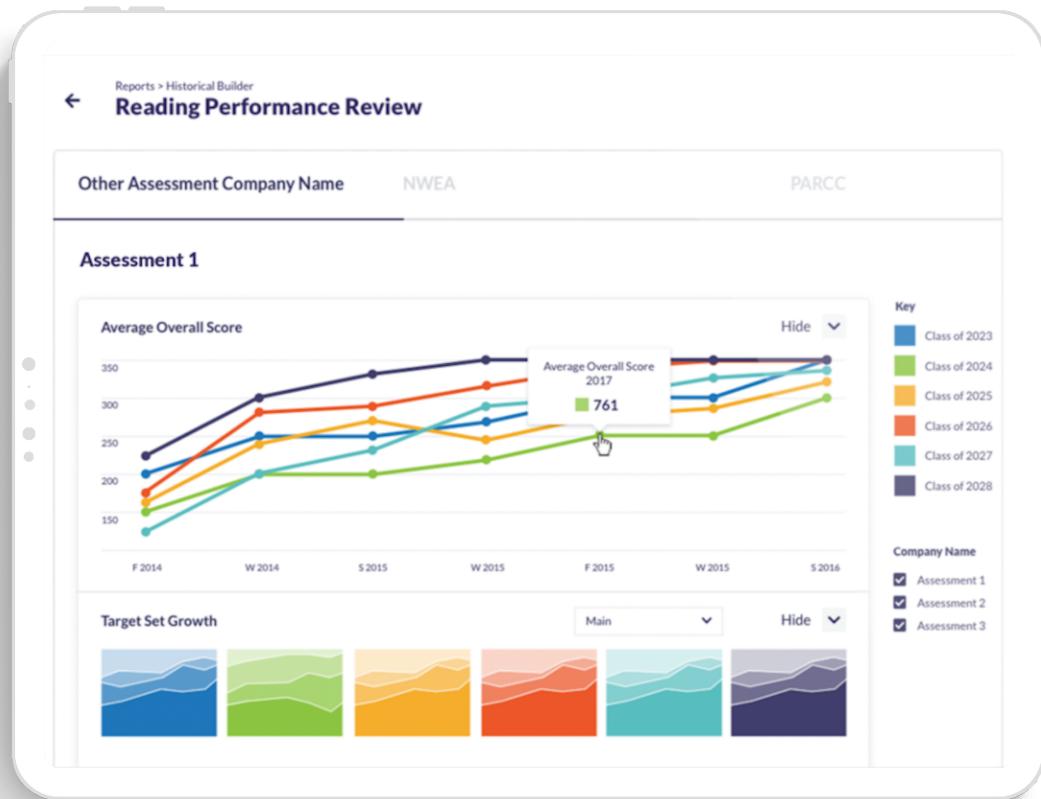

Marion County Public Schools needed a reliable platform to house all of their student third-party data. They felt that it was critical that teachers have a user-friendly database where they could show growth – especially during the pandemic. They needed a platform that could ingest all their data and make it easily accessible and actionable.

Actions

Otus was a perfect match for Marion County. To address the need for data-rich conversations about student growth, they used Otus' ability to house third-party data to bring all their data into one place. Data from sources like ACCESS, ACT, iReady, Lexia, Mastery Connect and NWEA that was previously tracked in various systems and spreadsheets was now available in one place for educators to analyze and act upon.

Results

Since implementing Otus, Marion County Public Schools have become power users of Otus' analytics tools by analyzing all their student data in one place. They have also begun to add to the data available by leveraging Otus to build and administer assessments. Within their first two years of implementation, Marion County completed over 14,000 assessments using Otus – all of which were instantly accessible to teachers and administrators. This assessment data in combination with third-party data has allowed teachers and administrators to have valuable, data-informed conversations about student growth.

Meet Otus Advanced Analytics

Otus brings all your student data together in one place, allowing you to spend less time finding relevant data and more time acting on it. Seamlessly access existing data with Otus' library of third-party data partners like NWEA, iReady, and Renaissance. Discover trends in student populations based on performance, demographic, behavioral, or social-emotional data that allow educators to quickly make data-informed decisions.

Student Performance

To see your students for who they are, look beyond academic performance.

Item Analysis

Analyze performance on classroom, benchmark, state and national assessments.

Cohort Analysis

See how students in a cohort move from low to higher performance targets on the same test over time.

Performance Data

Drill into a single point in time to understand the breakdown of performance for each cohort.

Software with a growth mindset

K-12 administrators, educators, students and families deal with disconnected edtech tools every day. Otus minimizes the chaos by providing one seamless platform to teach, grade, analyze and plan.

Access learning management, assessment, data and progress monitoring tools in one system, with one login. With Otus, school leaders can focus on student learning, not technology.
